

Version 1.0 | Date: 26.12.2025

Aura Verde LDA is committed to protecting the environment, addressing climate change and contributing to sustainable development through the responsible transformation of agricultural by-products into high-performance, biodegradable solutions.

Operating in Mozambique as a circular-economy manufacturing company, Aura Verde produces organic oil absorbents, coco peat, coir fiber and compost from locally sourced coconut husk residues. Our business model reduces agricultural waste, avoids methane emissions from decomposition and provides renewable alternatives to fossil-based and extractive materials.

Our Commitments

Aura Verde LDA commits to:

1. Environmental Protection & Pollution Prevention

Prevent pollution and minimize adverse environmental impacts by managing waste, emissions, energy use, water consumption and environmental risks associated with our operations, products and logistics.

2. Climate Action & Emissions Reduction

Contribute to climate change mitigation by reducing greenhouse gas emissions across our operations and value chain, improving energy efficiency, supporting circular material flows and developing nature-based, low-carbon products. We are committed to achieving Net Zero emissions by 2050, with near-term emissions reduction targets aligned with science-based pathways.

3. Compliance with Legal and Other Requirements

Comply with all applicable environmental laws, regulations and permits in Mozambique, as well as relevant international standards, customer requirements and voluntary environmental commitments.

This commitment includes compliance with national environmental licensing conditions and the implementation of approved environmental management and good practice procedures, including those required under Mozambique's environmental legislation and environmental impact assessment regulations.

4. Sustainable Resource Use & Circular Economy

Promote the efficient and responsible use of natural resources by valorising coconut husk waste, reducing reliance on non-renewable and fossil-based materials, optimizing material efficiency and supporting circular economy principles throughout the product life cycle.

5. Responsible Sourcing & Value Chain Engagement

Work collaboratively with farmers, suppliers, contractors and partners to encourage environmentally responsible practices, climate resilience, transparency and continuous improvement within our value chain.

6. Safe Operations & Environmental Risk Management

Identify and manage environmental risks associated with our activities and maintain effective operational controls, training and emergency preparedness to protect employees, communities and ecosystems.

7. Awareness, Training & Communication

Ensure that all persons working for or on behalf of Aura Verde understand their environmental responsibilities through training and awareness programs and communicate openly with stakeholders regarding our environmental and climate commitments and performance.

8. Product Responsibility & Innovation

Design, manufacture and supply biodegradable, non-toxic and environmentally responsible products that support spill prevention, environmental protection and sustainable industrial and agricultural practices.

9. Continual Improvement

This policy provides the framework for establishing and reviewing Aura Verde's environmental and climate objectives. We continually improve our environmental management system and environmental performance by setting measurable objectives and targets, monitoring key environmental and climate performance indicators and reviewing progress through regular internal reviews. This includes periodic monitoring, internal reviews and, where applicable, environmental audits in accordance with legal and other requirements.

This policy is communicated to all persons working for or on behalf of Aura Verde LDA and is publicly available.
